pH Fusion Tea - Much More than a Safe Antacid

Does pH Fusion Tea stoke the mitochondria to improve metabolic function, provide superior nutrient absorption, better body hydration and superior pH balance?

pH Fusion Tea Lesson

by JC Spencer

Formulation of pH Fusion Tea is designed to stoke the mitochondria with the fuel required to produce clean electricity needed to power your body.

The mitochondrion is the electron power generator of the cell. Improper fuel to the mitochondria or mitochondrial malfunction produces free radicals.

Mitochondrial dysfunction is an assay-mark of cancer, obesity, diabetes, cancer, cardiovascular and neurodegenerative diseases. The Mitochondria and Metabolism Center at the University of Washington confirms these findings and has established a large diverse community of researchers to pursue mitochondrial studies.

Surprisingly, there are hundreds and sometimes thousands of mitochondria in certain cells of your body. The British Society for Cell Biology confirms that there may be 1,000 to 2,000 mitochondria in each liver cell. E. D. Robin and R. Wong at the Department of Medicine at Stanford University School of Medicine in California wrote a paper entitled *Mitochondrial DNA molecules and virtual number of mitochondria per cell in mammalian cells*.

When I formulated pH Fusion Tea, I designed it to avoid the negative side effects of antacids and to provide health benefits to strengthen the cell membrane, improve metabolic function, and to support bone health. This design function provides the membrane pathway for delivering the multi-trace minerals through the cell's ion gates to the mitochondrion. This is explained in more detail in our materials.

Trehalose is the base ingredient of the formulation which functions well in a stomach acid environment. This supplies a stabilized glucose to the

mitochondria along with specific plant sourced bio-active ionic multi-trace minerals. The alkaline compound is electrostatically blended and designed to provide superior nutrient absorption and better body hydration. The pH Fusion Tea has a pH balance of 9.5 in water to help produce less acidic body fluids as can be tested in the urine and saliva.

Through pH Fusion Pilot Surveys, participants are helping us gather data from a wide range of health challenges. While not required in the Pilot Surveys, physicians and healthcare professions are welcome to observe and assist with clinical information.

Those interested can learn more about pH Fusion Tea Pilot Surveys and apply for matched funding at www.PilotStudies.net. Trial size and larger canisters of pH Fusion Tea are also available to the general public.

No medical claims are made or intended.
